

Job Title:

Junior Software Engineer - Technical Team

Who we are and what we offer you

Pinnacle is a trusted guide and expert partner of the world's leading law firms. We help our clients get the most from their critical business applications and the data these applications hold. We also have long-standing partnerships with both Thomson Reuters Elite and Intapp. We work alongside them to develop products that give our clients the maximum value, opportunity and advantage.

Our sole focus is on the legal sector and the specific technologies law firms depend on. This means we deliver projects faster and better than if we had a more general focus.

As a leading global consultancy, we work on projects with the top 100 law firms both in the UK and internationally. We're experiencing rapid growth so are looking for new talent in systems consulting.

Your role

Under general direction, you will work closely with the Technical Team Lead and other senior Pinnacle consultants to deliver software customisations according to managed requirements and software development standards set internally and by our clients.

Following an initial period of up-skilling at our Reading Office, where you will receive mentorship and training from the Tech Lead and other Senior team members, you will have the flexibility to work from home or from one of our offices.

Your key responsibilities will be to:

- ▲ Work with senior team in understanding the framework under which development will occur.
- ▲ Work to develop complex applications which are integrated within the constraints of the framework.
- ▲ As necessary, work with the team to develop and maintain existing applications.
- ▲ Acquire and maintain a high degree of business domain knowledge and current best practices.

Is this you?

Rather than a definite Pinnacle ‘type’, we’re looking for someone who is a winning blend of all the talents. So we’re never overly prescriptive in what we ask for.

While it would be great if you’ve already worked in technical team working on 3E Customisations, we’re really looking for a good mix of aptitude and attitude. For this role, that means problem-solving skills and a logical approach to challenges together with determination and an eagerness to learn.

Any of the following would also be an advantage:

- ▲ Familiarity with Object Oriented Programming.
- ▲ Basic knowledge of VB, C#, SQL, XML, Web Services.
- ▲ Strong analytical and problem-solving skills.
- ▲ Understanding of the full software development life cycle.
- ▲ Ability to manage workload to continually deliver excellent results.
- ▲ Self-motivation and learning drive.
- ▲ Ability to communicate effectively, verbally and in writing, with technical, business and management staff.
- ▲ Ability to manage multiple deliverables in a fast-paced environment within a framework of constantly shifting deadlines and deliverables.
- ▲ Excellent interpersonal skills with the ability to develop solid working relationships with colleagues and clients.
- ▲ Flexibility to adapt to change and to learn and develop new skill sets as required.

Our essential criteria

To be successful in your application you need to:

- ▲ Have a bachelor's degree or equivalent work experience
- ▲ Be able to commit to some UK travel.

The next steps

Please email your CV to suzanne.stubbings@pinnacle-oa.com with a note of introduction that will persuade us to invite you in for a chat.

We look forward to hearing from you.
