

# Get More Value Out of Your Data With Data Quality Monitor

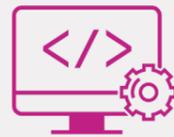

Data Quality Monitor proactively monitors and surfaces data problems in the systems it's integrated with, so you can take prompt action to resolve issues before they lead to costly, long-term consequences.

2 - 3 days for 'out-of-the-box' installation

We can manage your firm's checks and resolutions as a part of our Managed Service

Completely customizable, to fit into your workflows and requirements

## Confidence in Reporting

As a system agnostic application, Data Quality Monitor surfaces issues across all connected applications, saving you long hours of often manual work and ensuring that data that exists in multiple systems is correct and in sync. Commonly integrated systems include 3E, Elite Data Insights and Intapp Open.

## Flexible to Your Needs

Data Quality Monitor runs detailed checks according to your pre-determined schedules, highlighting issues as soon as they arise. You decide the frequency of the checks as well as who needs to be alerted when the urgency threshold of a data problem is exceeded.

## Dynamic Dashboards

Through dynamic PowerBI dashboards you can easily see issues across your entire data landscape, with the option to drill down to the finest details for each system or specific types of data problems. It allows you to focus on a fast resolution without spending time on trying to pinpoint the problem.

## Reduces Risks Across the Whole Firm

Knowing that you have a single truth about a matter or a client in every system ensures stakeholder confidence in data-driven decision-making. It allows for more insightful and profitable choices, better managed client expectations and stronger relationships.

## Confide in the Financial Data You Use for Decision-Making

### Introducing the Data Quality Monitor Connector to Elite Data Insights

Your financial data is the most commonly used data for business decision-making, but so often errors arise when data travels from Elite 3E to Data Insights where it is visualized through PowerBI dashboards. It could leave your firm in a place of looking at incorrect information to make decisions even if the raw data in the finance system is correct to begin with.

Data Quality Monitor's Elite Data Insights Connector solves this problem. It proactively checks that when financial data goes

through the necessary replication and summarization processes in order to be visualized it does not fall out of balance. It gives you confidence that the information on your dashboards reflect the facts in the finance system.

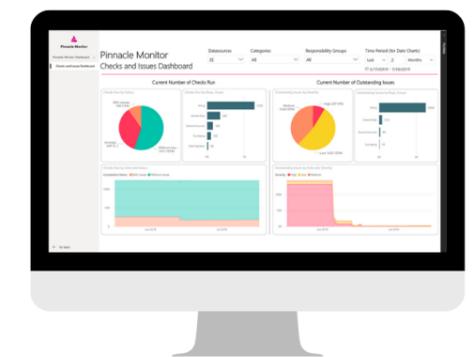

Have confidence that your data is dependable and that your visualizations are accurate!

Available as either a standalone product, or as part of our Managed Service.

## The BDO Success Story

***"Data Quality Monitor supports clarity in the data we have at any point in time. It is key to enabling a single source of truth and providing the firm with consistency in support of our firm wide operations."***

Mark Antell, Senior Enterprise Architect, BDO
